World' Environment Day

Climate Cost of War on Gaza

Theme: Our land. Our future. We are #GenerationRestoration

Huge impacts on Gaza's ecosystems and biodiversity

47% of Gaza's land area are orchards and farms

Until February **2024**

38% of the total agricultural land

and about **50%** of tree crops were destroyed

About **28%** of agricultural wells were destroyed

Ecocide that must be investigated

UNEP estimated

22.9 million tons

of debris and hazardous materials resulted from heavy bombing

281,000 tons of CO2

were generated by Israel's bombing and ground invasion of Gaza in the first two months of the war.
Larger than the annual carbon footprint of **more than 20 countries** with the world's most climate-vulnerable cities.

There are international calls for to investigate Israeli Government for the war crime for ecocide under the Rome Statute for **"widespread, long-term and severe damage to the natural environment"**
