Palestinian Central Bureau of Statistics (PCBS)

Palestinian Producer Price Index, May, 05/2026

Sharp decrease in the Producer Price[1] Index (PPI) during May 2026

The overall Producer Price Index (PPI) for Palestine with its base year (2019 = 100) reached 201.69 in May 2026, as it decreased sharply by 6.82% compared to April 2026.

PPI for locally consumed products during May 2026

Producer Price Index for locally consumed products (2019 = 100) reached 210.74 in May 2026, which indicates a sharp decrease of 7.06% compared to April 2026.

PPI for local exported products during May 2026

Producer Price Index for local exported products (2019 = 100) reached 117.23 in May 2026, which indicates a sharp decrease of 2.59% compared to April 2026.

The changes of PPI for May 2026 were traced back to changes in prices of the following major activities compared to the previous month:

Major Activities	Percent Change %
Agriculture, forestry and fishing	- 10.80%
Manufacturing	- 0.56%
Water supply; sewerage, waste management and remediation activities	+ 2.56%
Mining and quarrying	+ 1.08%
Electricity, gas, steam and air conditioning supply	+ 0.06%

Notice for Users:

1. The data collection process for agricultural commodities, which was collected in the same reference month, was complete for the West Bank. Due to the Israeli occupation aggression against Gaza Strip since October 7th,

[1] The producer's price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any VAT, or similar deductible tax, invoiced to the purchaser. The producer's prices exclude any transport charges invoiced separately by the producer.

2023, the data for May 2026, were collected through direct phone contact with PCBS fieldworkers working in Gaza Strip focusing on high relative importance within the main major groups in the producer price index.

2. The process of collecting data on industrial goods for the West Bank sample of industrial establishments was complete for May 2026, while in Gaza Strip; the data of all industrial establishments was estimated due to the accelerated Israeli escalation witnessed in Gaza Strip on October 7 during 2023 against all aspects of society.
3. International recommendations were followed in estimating the missing data, which are mentioned in Price Index guide. Moreover, the (Group Relative Method) is one of the best methods used to estimate the missing data, which is the process of estimating the prices based on the change in the prices of the remaining sources for the same category. Accordingly, in case of the closure of an entire source on a temporary basis, all the prices of that source are estimated based on the change in the prices of the sources that share the same items, which are collected from that source.
4. The estimate is also used at the (Next Level Up in Aggregation) in case of the disappearance of the index for a whole sub-group or a higher group reaching up to the major groups that constitute the index.
